

### Platform Supported

- Android: 4.0 and above

### Solutions We Offer

- The product - Mobsec
  - In-premise version, or
  - On-cloud version
- Cyber Intelligence Reporting service

### Key Benefits

- Tamper detection
- Network interface change monitoring
- Storage volume event monitoring
- Employee productivity
- Mobile application management
- Mobile content management

# Unified Solution for Mobile Device Management and Mobile Data Security

Companies' worldwide deal with huge volumes of information including customer data, customer billing information and information related to the business of the company itself. Business critical data is generated at almost every organizational endpoint which continues to stay unprotected against malicious activities such as theft, unauthorized share, copy and transfer to a different location, etc.

With the continuously increasing use of smartphones and tablets to access corporate data, it becomes very important to prevent data leak through any possible channel or medium. Mobsec provides an effective solution addressing the challenges of data loss prevention, device management and employee productivity monitoring.

## How MobSec can help?

Mobsec uses the concept of Cyber Intelligence extended to the mobile device paradigm as a unique approach towards reducing the business risks of a company through intelligent analysis of the information flowing within and outside the company and providing the following capabilities:

### Mobile Device Management

- Monitor and control device settings and features, including but not limited to:
  - Device rooting detection
  - Enforce device level encryption
  - Device online / offline status
  - Location tracking
  - Last connected time
- Device configuration and applications monitoring
- Mobile data connection/Wi-Fi networks connections monitoring
- Device on and off time monitoring
- SIM card change events monitoring
- Remote lock and wipe
- Disable camera, WiFi, Bluetooth
- Password protection enforcement
- Employee-liable and employer-liable support

### Mobile Application Management

- Application inventory tracking
- App whitelisting/blacklisting

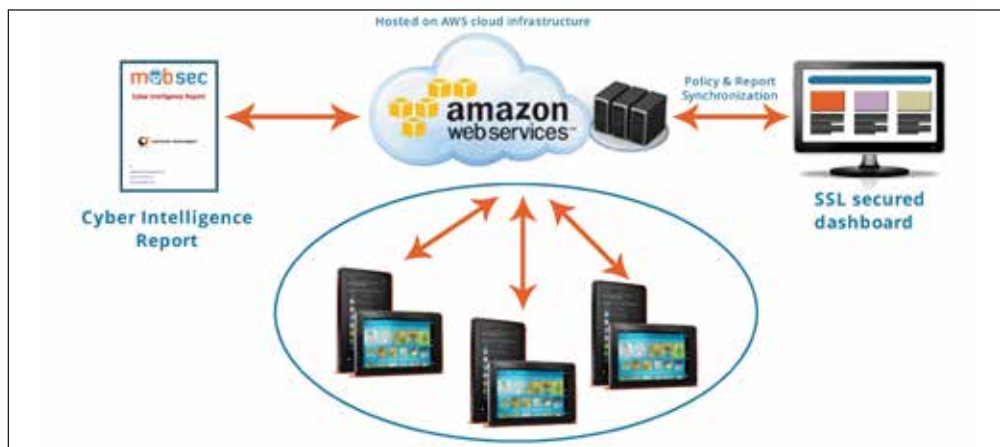

### Data Security

- Policy based control over device
- Secure business apps
- Encryption and Containerization
- Geofencing and Time fencing
- Connected peripherals monitoring and control
- Extended Android APIs support (Samsung KNOX)
- Profile based monitoring

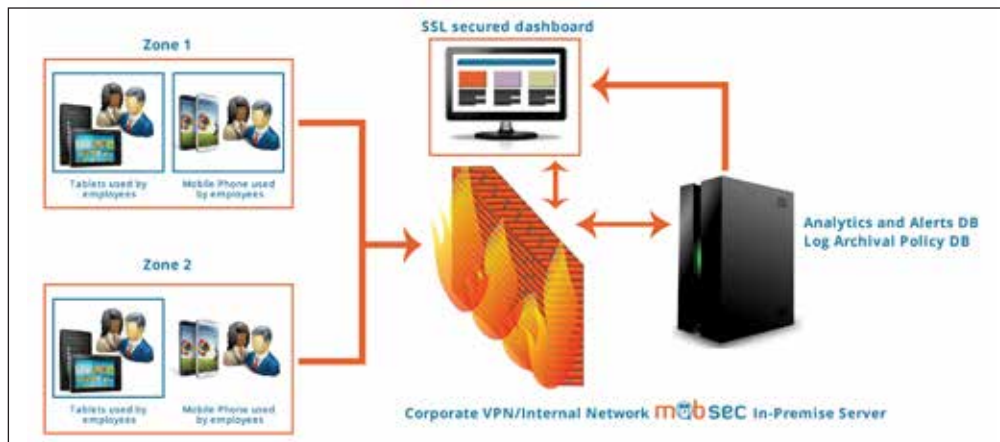

### Employee Productivity Monitoring

- Call (inbound and outbound); SMS and MMS monitoring (inbound excluded)
- File download monitoring
- Browser/Search activity monitoring
- App usage monitoring
